

Flexibility & Leg Control

柔功与控腿

Presses, held-leg lifts, splits, and controlled leg extension.

CHAPTER 1 • FIGURES 1-1–1-17 • 10 EXERCISES • 10 INSTRUCTIONAL PAGES

01 Front Leg Press	02 Side Leg Press
03 Rear Leg Press	04 Crouching- Step Leg Press
05 Front Held- Leg Lift	06 Side Held- Leg Lift
07 Rear Held- Leg Lift	08 Front Split
09 Side Split	10 Controlled Leg Hold

Follow each instructional row left to right. The source gives no fixed breath timing.

Front Leg Press

正压腿 · 图 1-1-1-2

1 / 1
FIGURES 1-1-1-2

Follow each row left to right.

Two standalone versions of the same front-leg flexibility drill.

STEP 1

Floor version

ACTION

Bend the right knee and extend the left leg forward. Hook the left toes upward and press both hands gently onto the left knee.

KEY POINT

Keep the pressed leg straight. Increase the range gradually, then change sides.

1-1

**STEP 2**

Supported version

ACTION

Place the left foot on a stable support near hip height. Hook the toes and fold the torso forward over the straight leg.

KEY POINT

Keep both knees extended and the support secure. Use a lower support whenever alignment changes.

1-2

Side Leg Press

侧压腿 · 图 1-3-1-4

1 / 1
FIGURES 1-3-1-4

Follow each row left to right.

Two standalone versions of the lateral leg press.

STEP 1

Floor version

ACTION

Sink over the right leg and extend the left leg to the side with the toes hooked. Reach the left arm overhead and incline toward the straight leg.

KEY POINT

Keep the straight leg long and the chest open. Press down without collapsing the supporting knee inward.

1-3

STEP 2

Supported version

ACTION

Place the left leg sideways on a secure support. Reach the left arm overhead and incline the torso toward the raised leg.

KEY POINT

Keep the support foot and standing foot stable. Progress by height only after the torso stays aligned.

1-4

Rear Leg Press

后压腿 · 图 1-5-1-6

1 / 1

FIGURES 1-5-1-6

Follow each row left to right.

Two standalone versions of the rear-leg and front-hip stretch.

STEP 1

Floor version

ACTION

Sink over the left leg and extend the right leg behind with the instep down. Let the upper body press gently back.

KEY POINT

Open the chest and hips while keeping the shoulders level. Avoid forcing the lower back.

STEP 2

Supported version

ACTION

Place the right leg behind on a secure support near hip height. Keep the hands at the waist and extend gently backward.

KEY POINT

Keep both legs straight and the pelvis controlled. Use a lower support if the back arches sharply.

Crouching-Step Leg Press

仆步压腿 · 图 1-7

1 / 1
FIGURES 1-7-1-7

Follow each row left to right.

One posture, divided into setup and working position.

STEP 1

Set the stance

ACTION

Squat fully over the right leg.
Extend the left leg sideways with
the toes turned slightly inward.

KEY POINT

Keep the extended knee straight and
the whole foot controlled. Use the
hands for balance as needed.

1-7

STEP 2

Press and alternate

ACTION

Hold the feet or ankles and settle
the hips downward into the
crouching-step shape.

KEY POINT

Work gradually and change sides.
Keep the heel of the squatting leg
grounded when possible.

1-7

Front Held-Leg Lift

正扳腿 · 图 1-8-1-10

1 / 1

FIGURES 1-8-1-10

Follow each row left to right.

The wall-supported pose is an alternative, not a continuation.

STEP 1

Lift and secure

ACTION

Stand on the right leg, lift the bent left knee, and secure the left foot and knee with the hands.

KEY POINT

Stand tall before increasing the lift. Keep the supporting knee steady and the gaze level.

1-8

STEP 2

Straighten or support

ACTION

Straighten the left leg forward and upward. The source also shows a wall-supported high hold.

KEY POINT

Do not pull the knee past a controlled range. Use a stable support and train both sides evenly.

1-9

1-10

Side Held-Leg Lift

侧扳腿 · 图 1-11-1-12

1 / 1

FIGURES 1-11-1-12

Follow each row left to right.

Two standalone versions of the lateral held-leg position.

STEP 1

Free-standing version

ACTION

Stand on the right leg, lift the left leg sideways, and support the ankle from the inside as the knee straightens.

KEY POINT

Keep the torso upright and the standing foot rooted. Raise only as high as alignment permits.

1-11

STEP 2

Wall-supported version

ACTION

Use a stable wall or post while holding the raised leg to the side.

KEY POINT

Use the support to refine posture, not to force height. Keep both knees straight and alternate sides.

1-12

Rear Held-Leg Lift

后扳腿 · 图 1-13-1-14

1 / 1

FIGURES 1-13-1-14

Follow each row left to right.

Both source versions require a partner and secure support.

STEP 1

Partner lift

ACTION

Hold a stable support while a partner raises the straight right leg behind and upward.

KEY POINT

The partner should lift slowly and stop immediately if the standing leg, hip, or back loses alignment.

1-13

STEP 2

Shoulder-supported version

ACTION

The source also shows a partner supporting the lifted leg across the shoulder while the standing practitioner holds a rail.

KEY POINT

Coordinate before moving. Keep the raised knee straight and avoid twisting the pelvis.

1-14

Front Split

竖叉 · 图 1-15

1 / 1

FIGURES 1-15-1-15

Follow each row left to right.

One posture, divided into entry and alignment checks.

STEP 1

Enter with support

ACTION

Slide the legs forward and back while keeping both knees straight. Use the hands on the floor to control the descent.

KEY POINT

Stop above the floor whenever the pelvis twists or either knee bends.

1-15

STEP 2

Settle and align

ACTION

Lengthen the legs into one front-to-back line. Keep the rear instep and the front foot aligned as shown.

KEY POINT

Lower gradually; never bounce. Practice both lead-leg versions.

1-15

Side Split

横叉 · 图 1-16

1 / 1

FIGURES 1-16-1-16

Follow each row left to right.

One posture, divided into entry and alignment checks.

STEP 1

Enter with support

ACTION

Slide both legs sideways while keeping the knees straight. Use the hands to regulate the descent.

KEY POINT

Keep the inner edges of the feet controlled and stop before the knees roll forward.

1-16

STEP 2

Settle and align

ACTION

Extend the legs into one side-to-side line with the toes facing upward.

KEY POINT

Lower gradually without bouncing. Keep the torso lifted and the hips centered.

1-16

Controlled Leg Hold

控腿 · 图 1-17

1 / 1

FIGURES 1-17-1-17

Follow each row left to right.

A balance-and-control drill rather than a swinging kick.

STEP 1

Lift the knee

ACTION

Stand on the right leg and raise the bent left knee toward the left side.

KEY POINT

Set the standing leg and torso before straightening. Use a support while learning the balance.

**STEP 2**

Extend and hold

ACTION

Straighten the left leg high to the side and hold it under muscular control.

KEY POINT

Keep the foot level and the supporting leg upright. Lower smoothly and train both sides.
