

Strength & Conditioning

功力训练

Loaded leg strength, locomotion, progressive contact, and bag work.

CHAPTER 1 • FIGURES 1-56–1-74 • 9 EXERCISES • 12 INSTRUCTIONAL PAGES

**Sandbag
Kicking**

Follow each instructional row left to right. The source gives no fixed breath timing.

Squat Holding a Stone Lock

提石锁下蹲 · 图 1-56

1 / 1

FIGURES 1-56–1-56

Follow each row left to right.

A loaded squat shown in one source figure; setup and repetition are separated for clarity.

STEP 1

Secure the load

ACTION

Stand upright with the stone lock centered between the legs and held firmly in both hands.

KEY POINT

Use a manageable load, clear floor space, and an even stance.

STEP 2

Squat and rise

ACTION

Bend the knees and hips to lower under control, then stand without swinging the weight.

KEY POINT

Keep the trunk braced and the knees tracking with the feet.

Hooked Stone-Lock Leg Extensions

脚勾石锁腿屈伸 · 图 1-57

1 / 1

FIGURES 1-57-1-57

Follow each row left to right.

A seated loaded knee-extension drill shown in one source figure.

STEP 1

Set the position

ACTION

Sit securely on the raised support and hook one foot through the handle of the stone lock.

KEY POINT

Stabilize the seat and begin with the knee bent and the load clear of the floor.

STEP 2

Extend and return

ACTION

Straighten the loaded leg forward, then bend the knee slowly to return.

KEY POINT

Use a light load first; do not swing or snap the knee.

Weighted Side Horse-Step Squat

负重侧马步蹲立 · 图 1-58-1-59

1 / 1

FIGURES 1-58-1-59

Follow each row left to right.

A linked lateral squat performed with a balanced shoulder load.

STEP 1

Set the shoulder load

ACTION

Stand in a wide stance with the bar balanced across the shoulders and both hands controlling it.

KEY POINT

Center the load before moving and keep the spine upright.

**STEP 2**

Sink to one side

ACTION

Shift over one leg and bend it deeply while the other leg lengthens to the side; rise and change sides.

KEY POINT

Keep both feet planted and use only a range that preserves knee alignment.

Weighted Squat

负重蹲起 · 图 1-60

1 / 1

FIGURES 1-60-1-60

Follow each row left to right.

A shoulder-loaded squat shown in one source figure.

STEP 1

Set the stance

ACTION

Balance the bar across the shoulders, take an even stance, and brace before descending.

KEY POINT

Use collars, a clear area, and a load that can be controlled without assistance.

STEP 2

Lower and stand

ACTION

Bend the hips and knees into the squat, then drive evenly through both feet to stand.

KEY POINT

Keep the load centered and avoid letting either knee collapse inward.

Weighted Heel Raise

负重提踵 · 图 1-61

1 / 1

FIGURES 1-61-1-61

Follow each row left to right.

A shoulder-loaded calf raise shown in one source figure.

STEP 1

Stand tall

ACTION

Set the shoulder load and stand with the feet parallel and the body vertical.

KEY POINT

Use a stable handhold or spotter if balance is uncertain.

1-61

STEP 2

Raise the heels

ACTION

Press through the forefeet to lift both heels, pause briefly, and lower with control.

KEY POINT

Keep the ankles aligned and avoid bouncing at the bottom.

1-61

Sandbag Leg Training

沙绑腿训练法 · 图 1-62-1-65

1 / 2

FIGURES 1-62-1-65

Follow each row left to right.

Four separate weighted locomotion and jumping drills; they are not one continuous sequence.

STEP 1

Secure the leg weights

ACTION

Fasten the sand weights evenly around the lower legs before walking or running on level ground.

KEY POINT

Check circulation and fastening; begin with short, controlled intervals.

1-62

STEP 2

Jump onto steps

ACTION

Use a compact two-foot jump to move onto a low, stable step.

KEY POINT

Start low, land softly, and stop if the weights shift.

1-63

Sandbag Leg Training

沙绑腿训练法 · 图 1-62-1-65

2 / 2

FIGURES 1-62-1-65

1-64

STEP 3

Hop up stairs

ACTION

Progress upward over regular steps while keeping the knees flexed and the landings quiet.

KEY POINT

Use a rail or spotter and never train on loose or uneven stairs.

1-65

STEP 4

Climb with control

ACTION

Step upward under the added leg load while maintaining an upright trunk.

KEY POINT

Favor steady placement over speed and train both lead legs evenly.

Leg Conditioning Strikes

排打 · 图 1-66-1-67

1 / 1

FIGURES 1-66-1-67

Follow each row left to right.

Two sides of a progressive self-tapping drill, not a movement chain.

STEP 1

Condition one side

ACTION

Use the training implement to tap along the fleshy surfaces of one leg as illustrated.

KEY POINT

Avoid joints, the shin edge, and injured tissue; begin very lightly.

1-66

1-67

STEP 2

Change sides

ACTION

Repeat the controlled tapping pattern on the opposite leg.

KEY POINT

Match the intensity on both sides and stop for sharp pain, numbness, or swelling.

Post Kicking

踢桩 · 图 1-68-1-71

1 / 2

FIGURES 1-68-1-71

Follow each row left to right.

Four separate post-contact variations; condition progressively rather than chaining them.

STEP 1

Front contact

ACTION

Place a controlled front kick against the post at a comfortable height.

KEY POINT

Begin with touch contact and a padded target; never strike an immovable post at full force.

1-68

STEP 2

Side contact

ACTION

Turn the hip and place the side of the foot or heel against the post.

KEY POINT

Align the ankle before adding pressure.

1-69

Post Kicking

踢桩 · 图 1-68-1-71

2 / 2

FIGURES 1-68-1-71

STEP 3

Angled contact

ACTION

Use the illustrated outward angle to place the lower leg or foot against the post.

KEY POINT

Keep the standing knee free to turn and avoid twisting it.

STEP 4

Low straight contact

ACTION

Extend the leg into the lower post and withdraw along the same path.

KEY POINT

Use controlled range and alternate legs; power is not the first progression.

Sandbag Kicking

踢沙袋 · 图 1-72-1-74

1 / 2

FIGURES 1-72-1-74

Follow each row left to right.

Three independent bag-contact variations; each should be practiced separately.

1-72

STEP 1

Side kick contact

ACTION

Place a controlled side kick into the hanging bag and retract without losing posture.

KEY POINT

Let the bag hang freely and keep the support foot able to pivot.

1-73

STEP 2

Front kick contact

ACTION

Drive the foot forward into the center of the bag, then return to balance.

KEY POINT

Keep the toes and ankle organized for the chosen contact surface.

Sandbag Kicking

踢沙袋 · 图 1-72-1-74

2 / 2

FIGURES 1-72-1-74

STEP 3

Low-line contact

ACTION

Use the illustrated lower-line kick against the bag from a stable stance.

KEY POINT

Do not chase a swinging bag with a locked knee.

STEP 4

Reset between kicks

ACTION

Allow the bag to settle enough to re-establish distance before the next repetition.

KEY POINT

Increase force only after placement, retraction, and balance are consistent.
