

▲ inhale ▼ exhale ► order of motion ► path the hands travel

SET THE STANCE

Prepare

breathe naturally

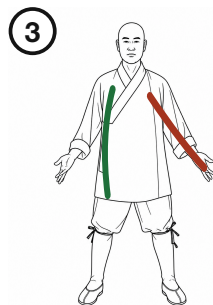

1–2 · Stand upright, feet together, open hands at the sides. Step the left foot out past shoulder-width and gather both hands to the *dantian* (lower abdomen), right palm outside. Settle here and breathe naturally — this is the resting breath the whole set returns to.

FIRST BREATH

In→Out

deep in, then long out
— through the nose

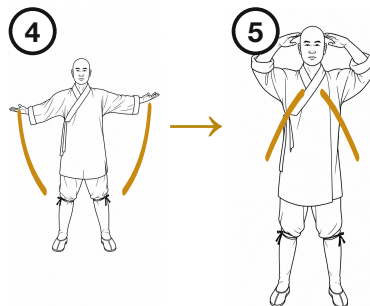

3 · On a deep **inhale**, raise both hands up to ear height, palms down. Then on a long **exhale**, sweep the arms open and down to the hips, palms facing out. One breath in, one long breath out — this sets the rhythm for everything that follows.

ONE INHALATION

Inhale

deep, until full
— through the nose

4–5 · Lift both open hands out and up to shoulder height, palms up. Without breaking the inhale, bend the elbows and draw the hands in toward the forehead, fingertips facing — keep drawing breath in until the lungs are full.

ONE EXHALATION

Exhale

long and slow
— through the nose

6 · Press both open hands slowly down the front of the face, past the chest, all the way to the lower abdomen — letting the whole exhale empty out as the hands sink.
