

Each panel is one breath. Follow the poses left to right; the coloured arrow is the breath that moves you: ▲ **inhale**, ▼ **exhale**.

Set up

breathe naturally

Step the **left** foot out shoulder-width. Draw both hands to the lower belly, right palm outside.

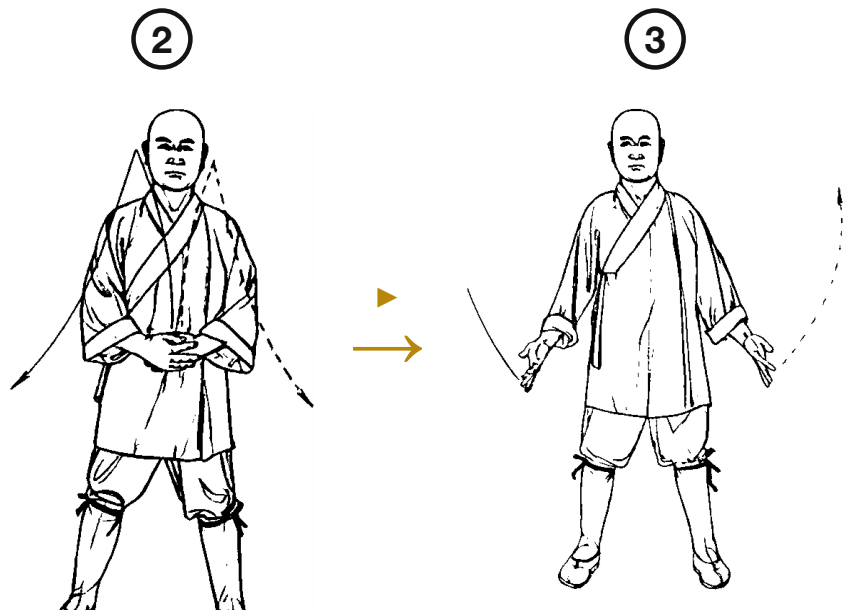

In & Out

one full breath, through the nose

Inhale — hands up to ear height, **palms down**.

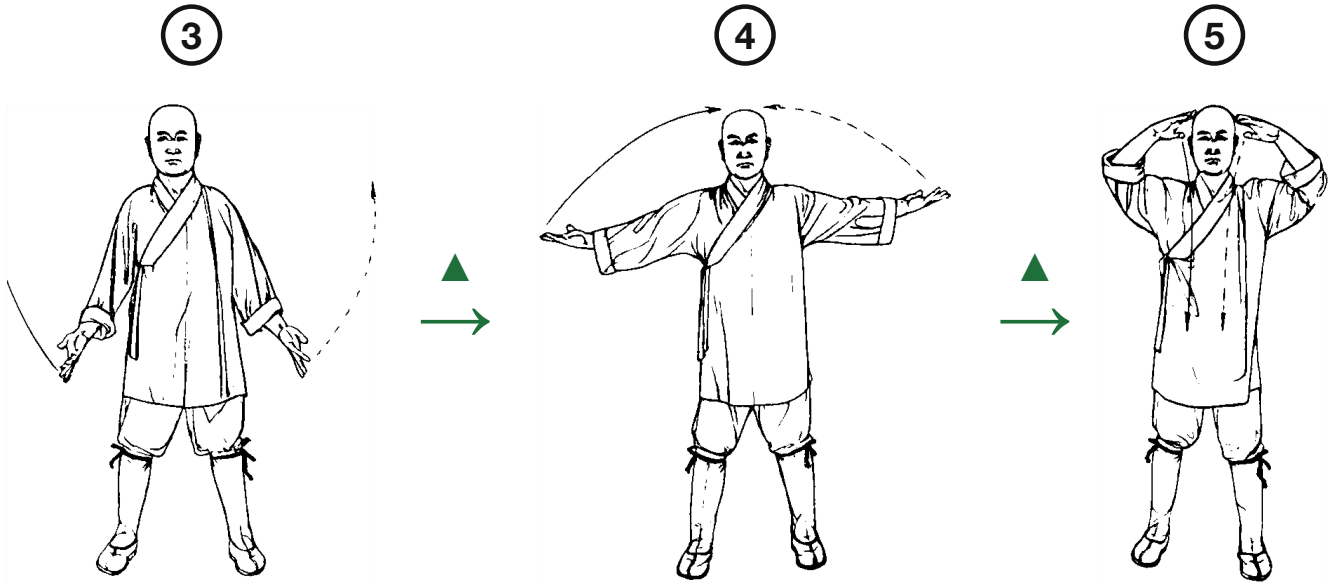

Exhale — arms open and down to the hips, **palms out**.

Inhale

deep — until the lungs are full

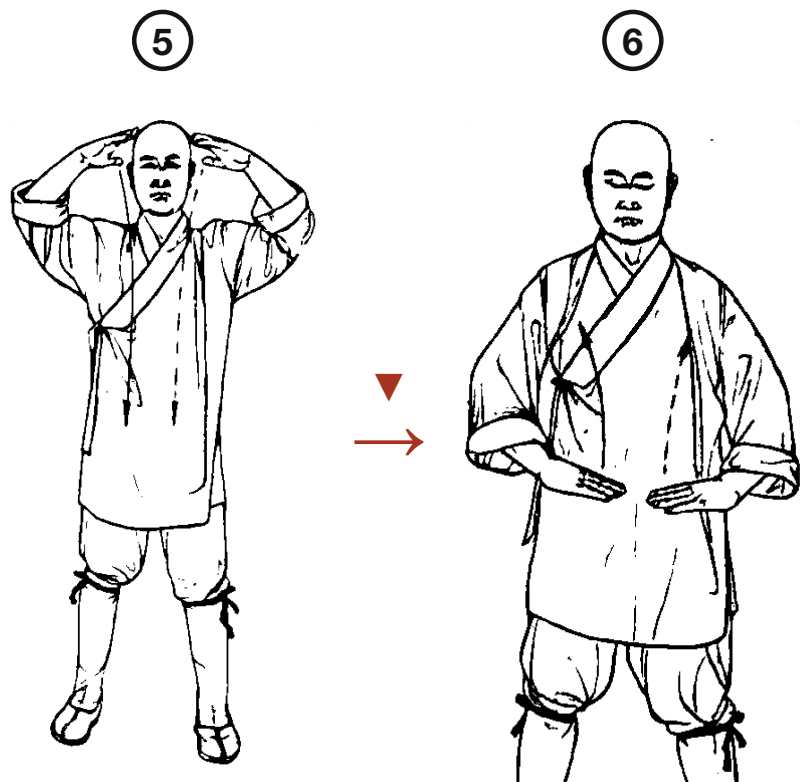

Raise the hands out and up to the shoulders, **palms up**; then fold them in to the forehead, **palms down**.

Exhale

long — through the nose

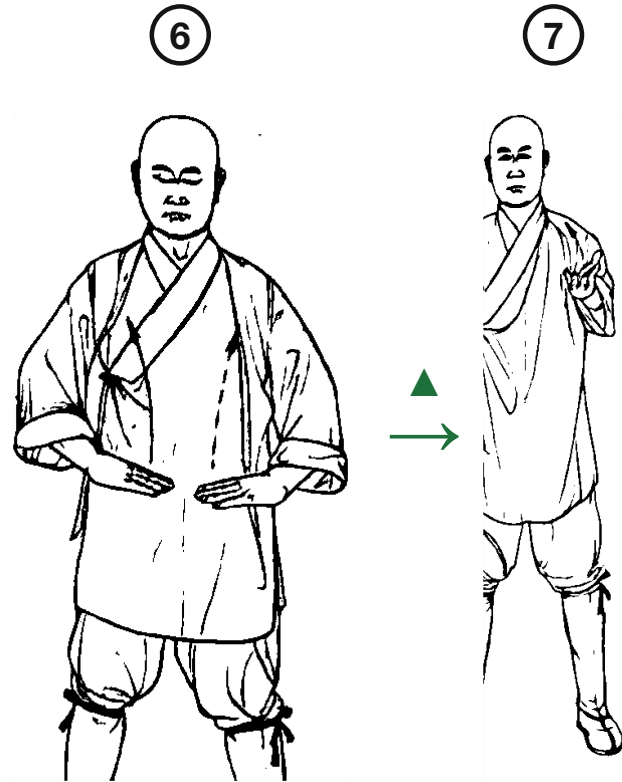

Press both hands down the front — face, chest, to the lower belly.

Inhale

deep — through the nose

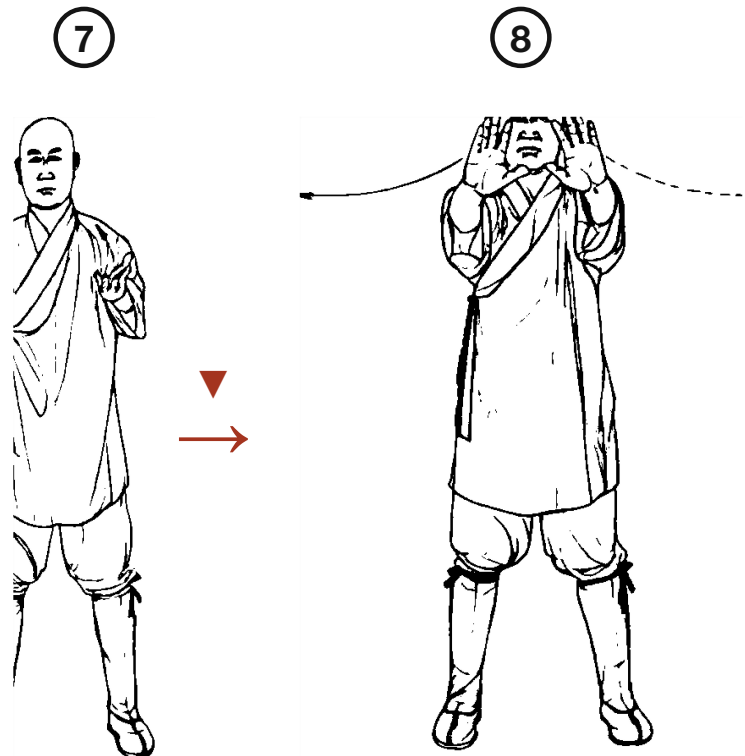

Turn the palms **up**; lift the hands to the front of the armpits, fingertips forward.

Exhale

long — through the nose

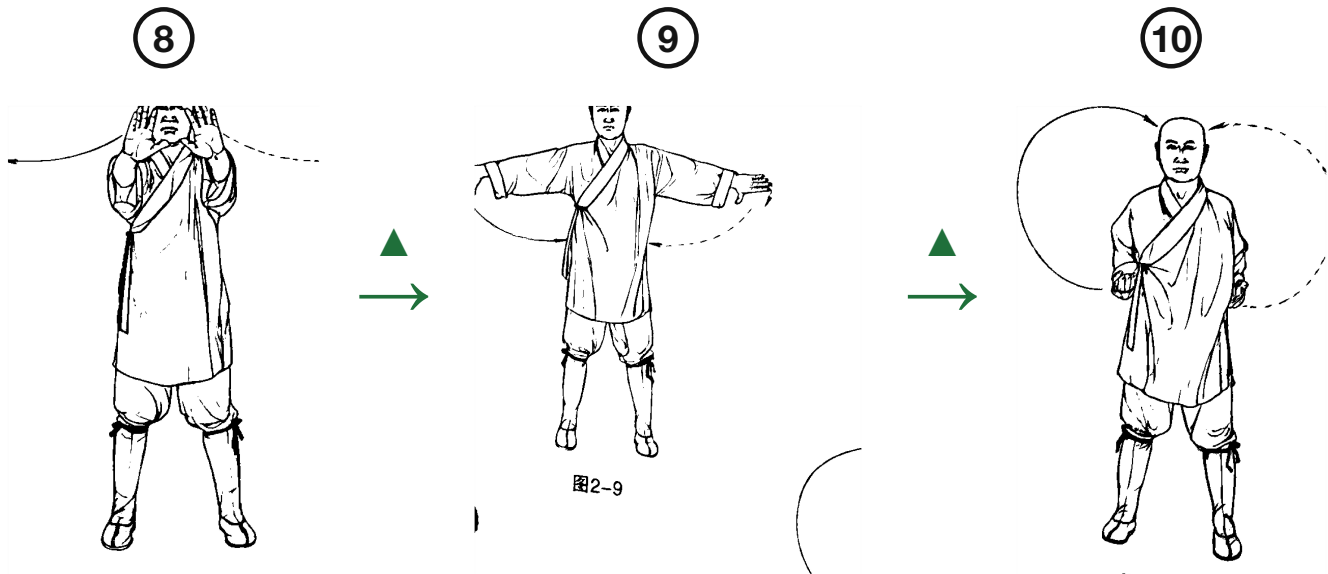

Turn the hands and push both palms forward at shoulder height — **palms out, fingertips up**.

Inhale

deep — one unbroken breath

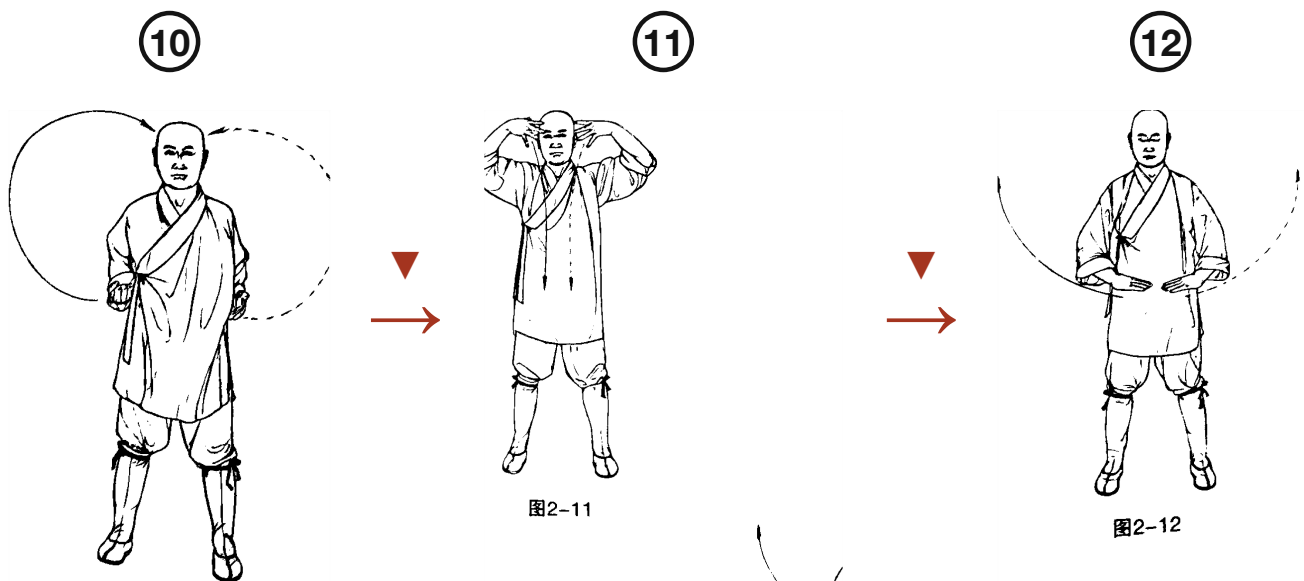

Open the arms wide, **palms back**; make fists and pull them to the waist, **palm-up**.

Exhale

long — one unbroken breath

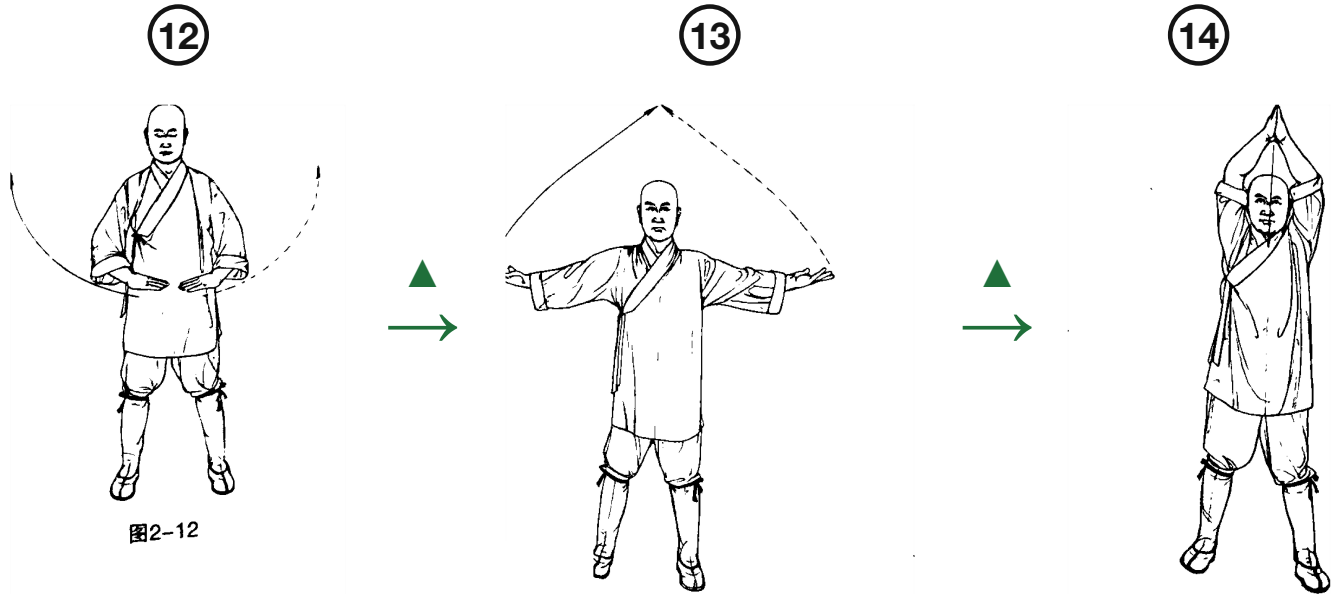

Open the fists; arc the hands up the sides to the forehead, **palms down**; press down to the belly.

Inhale

deep — one unbroken breath

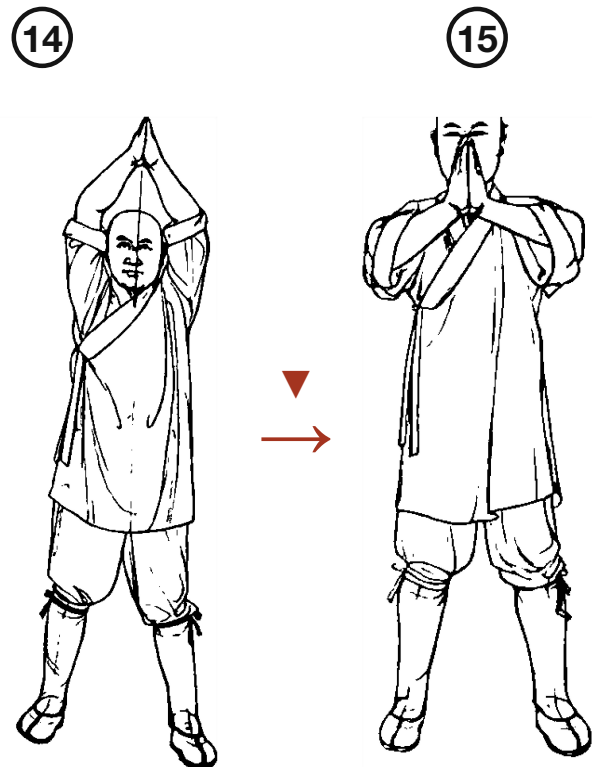

Spread the hands to the sides, **palms up**; raise them until the palms join overhead (*heshi*).

Exhale

long — through the nose

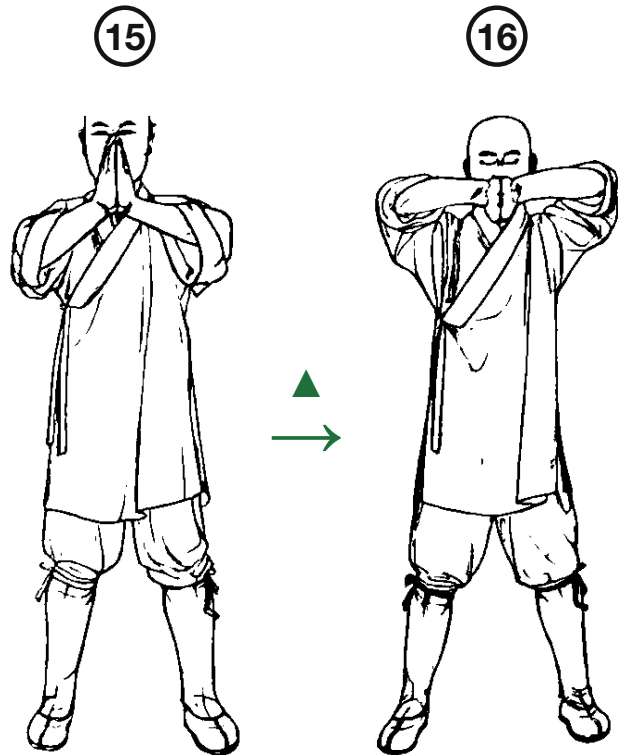

Palms joined, sink the elbows to shoulder level — fingertips at nose height, arms a half-arc.

Inhale

deep — through the nose

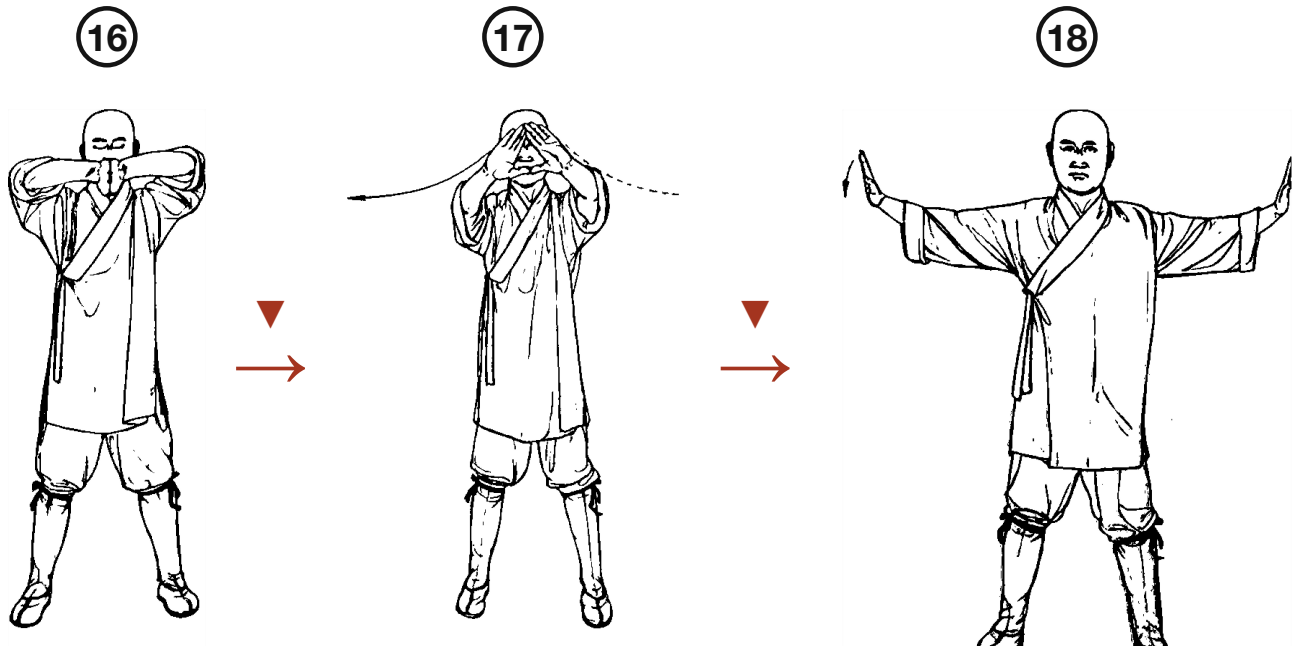

Slowly turn the joined palms inward, fingertips pointing back toward the nose.

Exhale

long — one unbroken breath

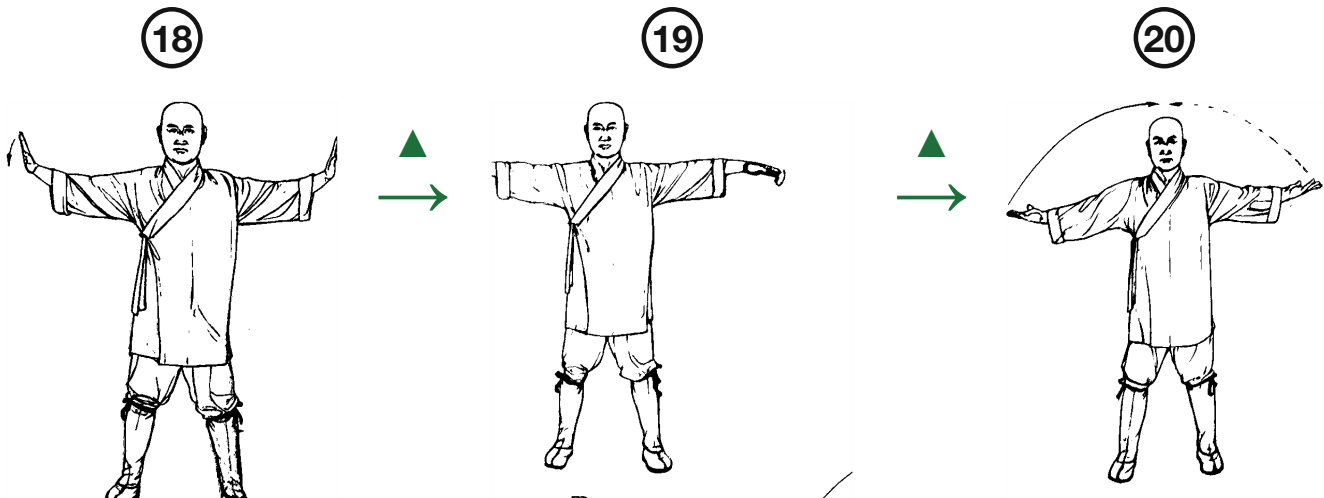

Push the joined hands forward to straight; then open them out — **palms upright, facing out.**

Inhale

deep — one long breath

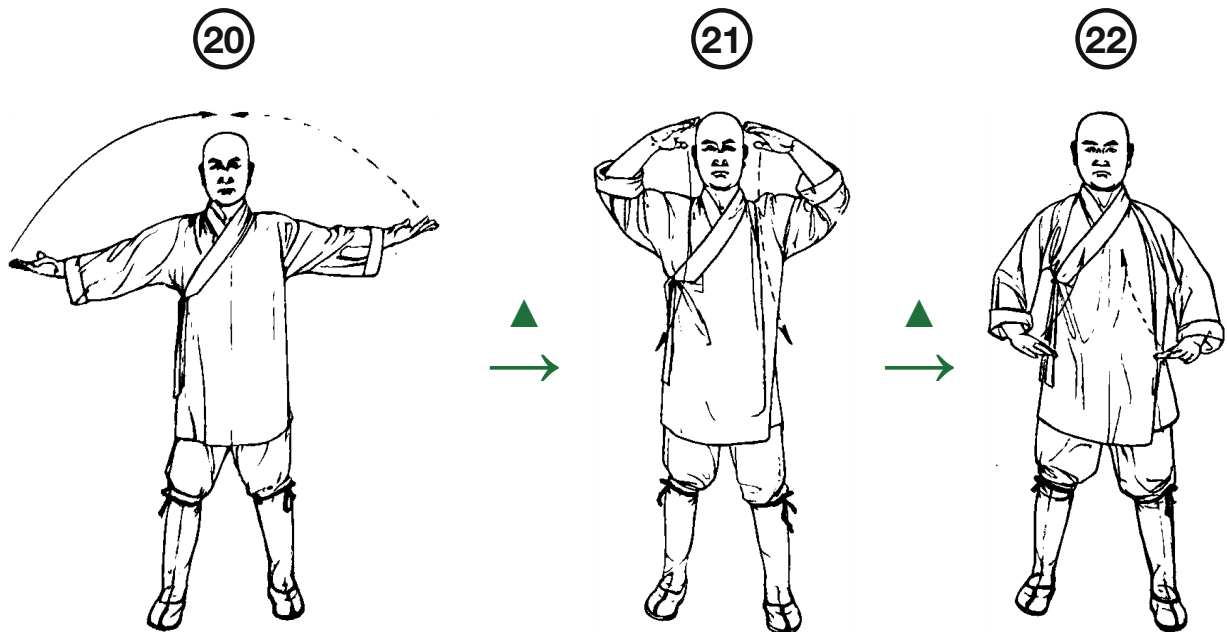

Sink the hands to one straight line — shoulders, arms, hands level; turn the **palms up**.

Inhale

... the same breath,
continued

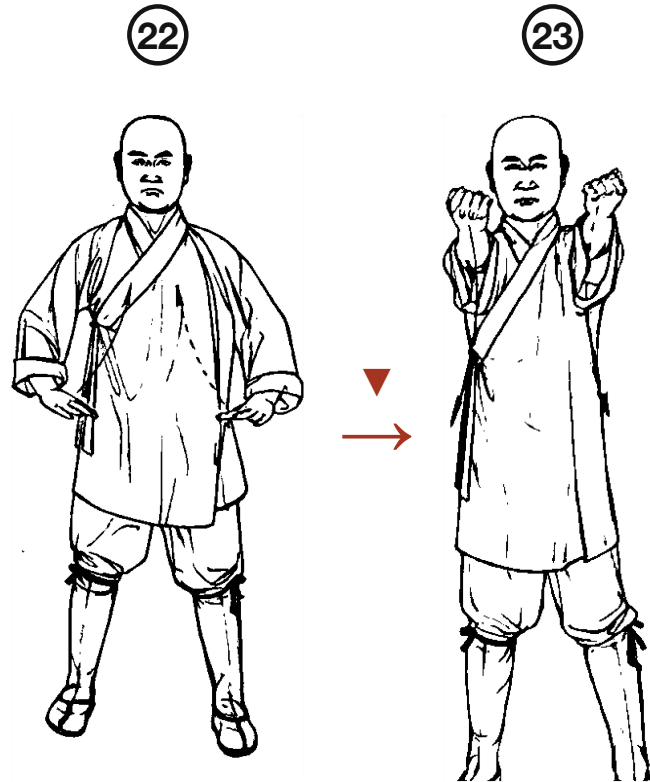

Still inhaling — gather the hands above the forehead, **palms down**; press down to the waist.

Exhale

long — through the nose

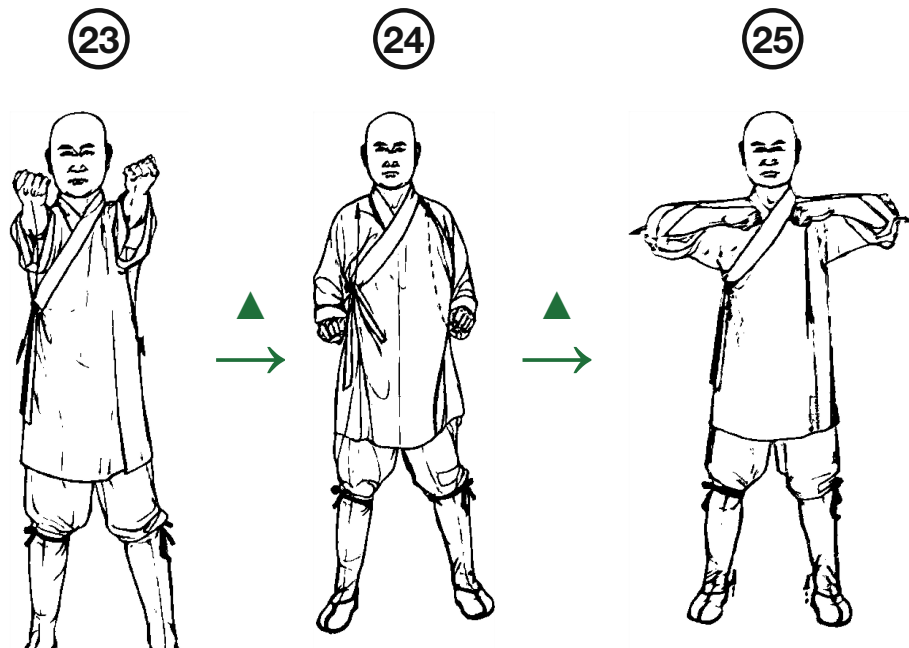

Make fists and raise them forward to shoulder height — arms straight, **palm-up**.

Inhale

deep — one long breath

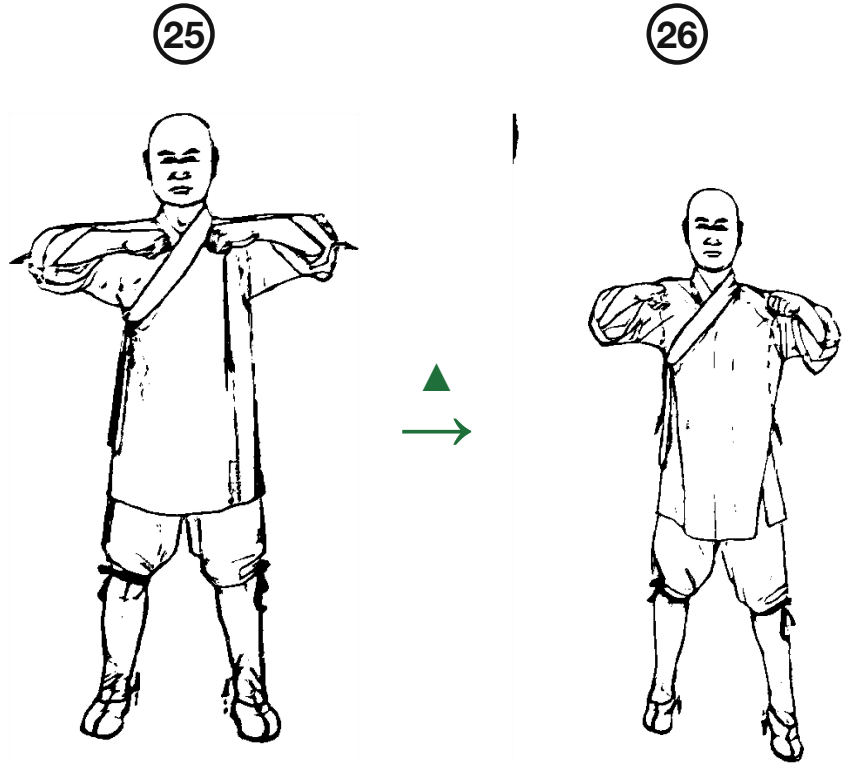

Turn the fists in, draw them to the waist, **palm-down**; lift them before the chest, knuckles facing.

Inhale

... the same breath, continued

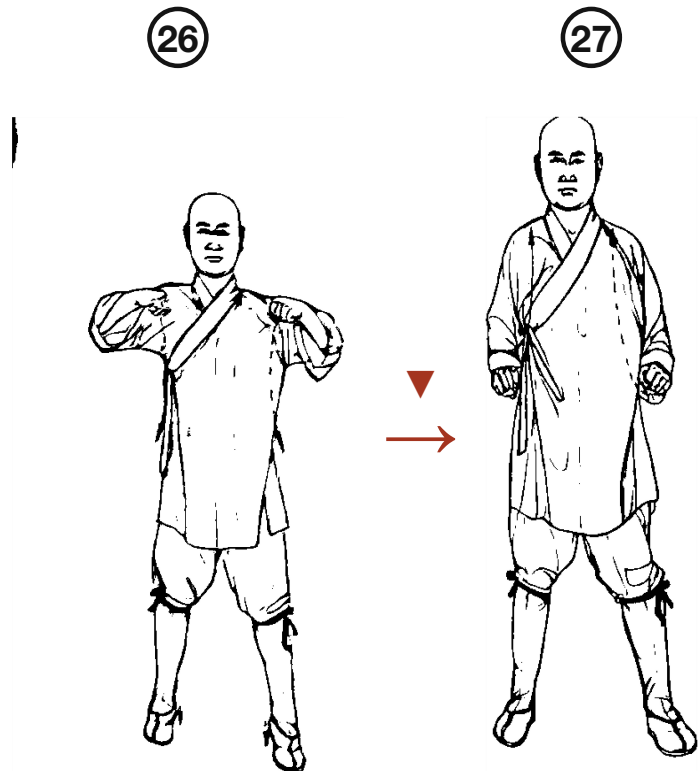

Still inhaling — pull the fists apart to the shoulders as the heels rise onto the balls of the feet.

Exhale

long — through the nose

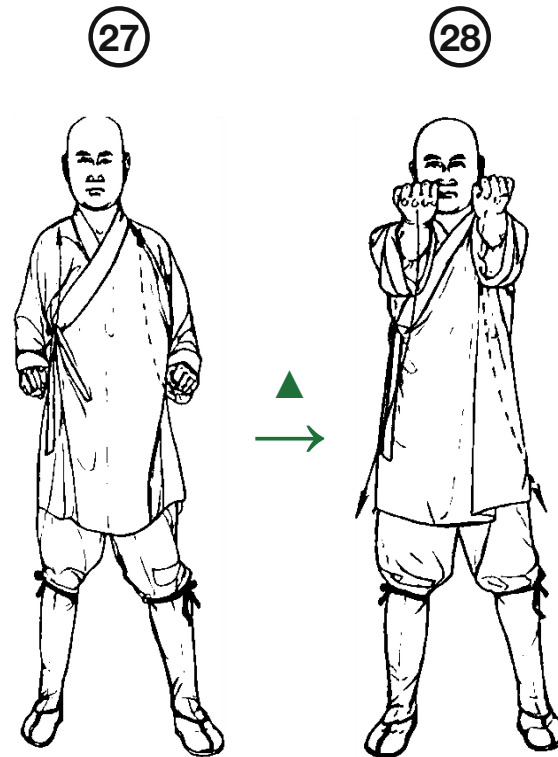

Draw both fists back to the waist, **palm-down**; set the heels down.

Inhale

deep — through the nose

Push both fists forward at shoulder height, **palm-up**, leaning the body slightly back.

Close

long — then even out

Open the fists, let the hands fall to the sides. Relax, even the breath, and close.
