

图2-1

**1 BREATHE NATURALLY**

Bring the feet together and stand with the body aligned upright; let both open hands hang at the sides of the body; breathe naturally. Gaze forward. (Figure 2-1.)

**2 DEEP INHALATIONS · PROLONGED EXHALATIONS**

Step the left foot one step horizontally to the left, leaving the feet slightly more than shoulder-width apart; at the same time, draw in both open hands and hold them at the *dantian* (lower abdomen), with the right palm on the outside. After the posture has been set, remain still. Perform several deep inhalations and prolonged exhalations; determine the number yourself. (Figure 2-2.)

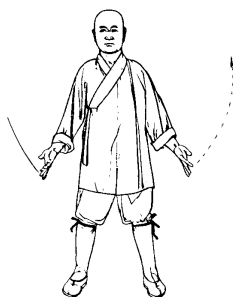

图2-3

**3 DEEP INHALE THROUGH THE NOSE · THEN PROLONGED EXHALE THROUGH THE NOSE**

Inhale deeply through the nose; separate the two open hands and lift them upward, palms facing down, to approximately ear level. Immediately afterward, make a prolonged exhalation through the nose; slowly spread both arms open toward the sides and place the hands outside the hips, palms facing outward and the tiger's mouths—the thumb-index webs—directed backward. (Figure 2-3.)

图2-4

**4 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; lift both open hands outward and upward while extending the arms, palms facing up and fingertips pointing outward, at shoulder height. (Figure 2-4.)

图2-5

**5 CONTINUE INHALING UNTIL FULL**

Bend the elbows and bring the two open hands inward toward one another in front of the forehead, fingertips facing each other and palms facing down; continue inhaling until full. (Figure 2-5.)

**6 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; press both open hands downward along the front of the face, passing in front of the chest and continuing to the lower abdomen. (Figure 2-6.)

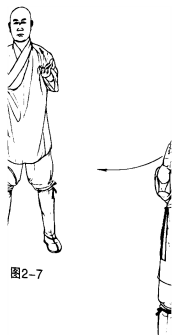

图2-7

**7 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; externally rotate both open hands so the palms face up, then lift them in front of the armpits, fingertips pointing forward. Gaze forward. (Figure 2-7.)

图2-8

图2-8附图

**8 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; turn the hands, extend the arms forward, and push out. Keep the wrists at shoulder height, with the palms facing forward and the fingertips pointing upward. (Figure 2-8.)

图2-9

**9 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; open the arms and separate the two open hands to the left and right at approximately shoulder height, with the tiger's mouths directed downward and the palms facing backward. (Figure 2-9.)

图2-10

**10 CONTINUE THE SAME INHALATION WITHOUT INTERRUPTION**

Continue the same inhalation without interruption; curl the fingers of both hands to form fists and draw them downward to the waist, with the palm sides of the fists facing up. Gaze forward. (Figure 2-10.)

图2-11

**11 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; open both fists into open hands and raise them in arcs from the sides of the body to the front of the forehead, palms facing down, all five fingers spread, and fingertips facing one another. (Figure 2-11.)

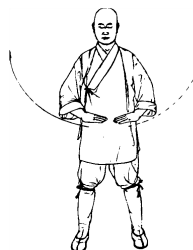

图2-12

**12 CONTINUE THE SAME EXHALATION WITHOUT INTERRUPTION**

Continue the same exhalation without interruption; press both open hands downward past the chest until they are in front of the lower abdomen. (Figure 2-12.)

图2-13

**13 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; separate the two open hands to the left and right and extend the arms at shoulder height, palms facing up and fingertips pointing outward. (Figure 2-13.)

图2-14

**14 CONTINUE THE SAME INHALATION WITHOUT INTERRUPTION**

Continue the same inhalation without interruption; continue raising both open hands from the sides in arcs until they are above the head. Place the two palms together in *heshi*, fingertips pointing upward. Gaze forward. (Figure 2-14.)

图2-15

图2-15附图

**15 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; keeping the palms joined, bend the elbows and sink the arms. Keep the elbows level with the shoulders; the tips of both middle fingers are approximately level with the tip of the nose, and the two arms form a half-arc. (Figure 2-15.)

图2-16

**16 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; slowly rotate the joined palms inward so the fingertips point inward and align with the tip of the nose, with the tiger's mouths directed downward. (Figure 2-16.)

图2-17

图2-17 附图

**17 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; separate the heels of the two palms, with the palms facing forward, the thumb tips facing one another, and the index-finger tips meeting. Extend the arms and push forward until the arms are straight. (Figure 2-17.)

**18 CONTINUE THE SAME EXHALATION WITHOUT INTERRUPTION**

Continue the same exhalation without interruption; separate the two open hands to the left and right, with both wrists at shoulder height. Set the wrists in extension (*zuòwǎn*) so the palms stand vertical, fingertips pointing upward and palms facing outward. (Figure 2-18.)

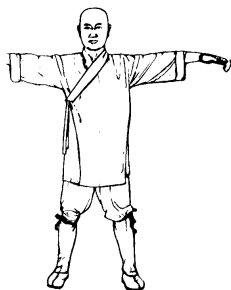

图2-19

**19 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; sink both open hands and extend the palms and fingers horizontally, so that the shoulders, arms, and hands form one straight line. (Figure 2-19.)

图2-20

**20 CONTINUE THE SAME INHALATION WITHOUT INTERRUPTION**

Continue the same inhalation without interruption; turn both open hands over so the palms face up and the fingertips point outward. Gaze forward. (Figure 2-20.)

图2-21

**21 CONTINUE THE SAME INHALATION WITHOUT INTERRUPTION**

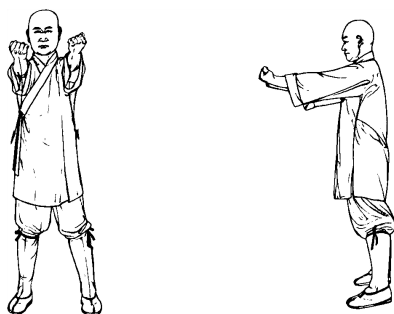

Continue the same inhalation without interruption; raise both open hands and bring them inward toward one another to a position above and in front of the forehead, fingertips facing each other and palms facing down. (Figure 2-21.)

图2-22

**22 CONTINUE THE SAME INHALATION WITHOUT INTERRUPTION**

Continue the same inhalation without interruption; press both open hands downward, passing in front of the chest and continuing to the sides of the waist, with the fingertips facing one another. (Figure 2-22.)

**23 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; close both open hands into fists and raise them forward, keeping the straight arms level with the shoulders and the palm sides of the fists facing up. (Figure 2-23.)

图2-24

**24 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; turn both fists inward and then draw them back, with the palm sides of the fists facing down, until they reach the two sides of the waist. (Figure 2-24.)

图2-25

**25 CONTINUE THE SAME INHALATION WITHOUT INTERRUPTION**

Continue the same inhalation without interruption; lift both fists in front of the chest, with the fist faces—the knuckle surfaces—facing one another and the palm sides of the fists facing down. (Figure 2-25.)

图2-26

**26 CONTINUE THE SAME INHALATION WITHOUT INTERRUPTION**

Continue the same inhalation without interruption; pull the two fists apart to positions in front of the shoulders. At the same time, raise both heels clear of the ground and support the body through the forefeet—the balls of the feet. (Figure 2-26.)

图2-27

**27 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; slowly draw both fists back to the waist, with the palm sides of the fists facing down; lower the heels. (Figure 2-27.)

图2-28

**28 INHALE DEEPLY THROUGH THE NOSE**

Inhale deeply through the nose; push both fists forward at shoulder height, inclining the upper body slightly backward, with the palm sides of the fists facing up. (Figure 2-28.)

**29 PROLONGED EXHALATION THROUGH THE NOSE**

Make a prolonged exhalation through the nose; open both fists into open hands and lower them to hang at the sides of the body. Finally, relax the whole body, regulate the breathing until it is even, and close the form. (Figure 2-29.)
