

I. Standing-Method Tu-Na Practice

1

BREATHE NATURALLY

Bring the feet together and stand with the body aligned upright; let both open hands hang at the sides of the body. Gaze forward.

2

SEVERAL DEEP INHALATIONS AND PROLONGED EXHALATIONS

Step the left foot one step horizontally to the left, leaving the feet slightly more than shoulder-width apart; at the same time, draw in both open hands and hold them at the *dantian* (lower abdomen), with the right palm on the outside.

After the posture has been set, remain still. Perform several deep inhalations and prolonged exhalations; determine the number yourself.
